CDJ-800

Features & Functions

Vinyl/CD Mode

The CDJ-800 can be set in either Vinyl or CDJ mode. In CDJ mode, the jog dial functions just like a Pioneer CDJ player, but without the touch sensitivity.

Vinyl Speed Adjust

With one knob you can adjust both the "wind down" and "wind up" of your song.

Instant Reverse Play

Instant reverse is possible at a touch of a button. With no loss of tempo or pitch, it can be used immediately within any track without having to stop or start. Reverse can also be used with the Looping Function to provide endless combinations and effects.

Vinyl Rotating Center Display

Indicates current play position. 135 frames for one rotation. The Display is animated showing the direction of play either forward or reverse.

One Touch Auto Beat Loop (New)

This is two features in one. This can set an automatic perfect loop for you at the touch of button. The 4 buttons essentially turn in to timing buttons allowing you to create 1, 2, 4, or 8 beat loops. Or if you have already created your loop manually, these 4 buttons will cut your loop to create 1/1, 1/2, 1/4, 1/8 beat cuts of your initial loop.

Quick Return Play (New)

This button, when activated, allows the user to return to the cue point simply by touching the jog dial giving the DJ more creative options.

Extended Master Temp (+/-10%. +/-100%)

Pioneer's legendary Master Tempo feature offers +/- 10% and +/- 100% range.

Extra Fast Track/Song Search

Turning the Jog Dial with the press of the Track Search or Search button allows higher speed search. This function is convenient for CDs with many tracks or for songs that have an extended length.

16 second Memory Buffer Shock System

Sound jumps or skipping is prevented by using a 16 second shock-proof memory for normal CD play (minimum of 10 seconds if scratching in vinyl mode).

Legato Link Conversion

Equipped with Pioneer's wide range technology, the CDJ-800 is capable of reproducing sound frequencies above 20 kHz, which are lost during normal CD-format playback. Not only does this give great sound reproduction but sounds closer to the original recording and gives more of an analog type of sound.

Oil Damping Anti-Vibration Mechanism

Oil-dampened floating suspension prevents sound skipping, even when the player is subjected to impact during use or vibrations are generated from high volume music and low frequency bass.

Front Loading

Designed principally for ease of CD changing, it also reduces the risk of accidental damage to the player.

Full Functional Digital Out (New)

The CDJ-800 is equipped with an on/off digital output (phono) which can be utilized for studio use. All functions of the player are available while in Digital Output Mode.

Specifications

System.....**Compact Disc Digital Audio System**

Disc Format.....**CD, CD-R and CD-RW**

Power Requirements.....**120V, 60Hz**

Power Consumption.....**18W**

Net Weight.....**8.6lbs**

Dimensions.....**12(W) x 13(D) x 4.3(H)in**

Audio Frequency Response.....**4Hz to 20kHz**

Signal To Noise Ratio.....**115 dB or more**

Distortion**0.006% (EIAJ)**

Accessories Included.....**Operating Manual**
