

DSR DVD-D884RM Rackmount

The DSR DVD-D884RM is Microboards's multi-drive DVD-R/CD-R duplicator employing the use of General Purpose DVD-R recorders. The unit supports both standalone and computer-connect operation and allows you to copy from multiple DVD formats.

An intuitive, menu-driven display and 2-button control interface provide simple one-touch operation for the novice user while giving access to advanced features for the professional. The hard drive comes standard with the system and allows the user to archive up to 10 CD and/or DVD images or perform CD track extraction for CD audio compilations. Content protection makes it impossible to copy encrypted entertainment titles on general purpose media. Check out our DVD FAQ for more information.
